PROFESSIONAL SUMMARY

Senior Data Engineer with 3.5+ years of experience architecting scalable ETL/ELT pipelines, cloud-native data warehouses, and production-grade microservices. Deep hands-on expertise in Python, SQL, and Snowflake, processing 200K+ records in under 15 minutes while driving a 40% reduction in compute costs. Building reusable Python/Snowflake frameworks that enabled structured access to historical enterprise data. Strong foundation in data modelling, transformation logic, data quality governance, workflow orchestration, and cloud platforms (GCP, AWS, Snowflake).

TECHNICAL SKILLS

Analytics & Languages:	Python (Pandas, PySpark, Snowpark), Java, SQL, XML/JSON Parsing
Data Analysis & Modelling:	Data Transformation, Data Quality & Reconciliation, Reporting
Data Platforms:	Snowflake (Snowpark, Stored Procedures), PostgreSQL, MySQL, BigQuery
ETL/ELT & Orchestration:	ETL/ELT Pipelines, Control-M, Airflow, Informatica IICS, HVR, Fivetran
GenAI & LLM:	RAG Workflows, LLM APIs (Anthropic/Claude, LLaMA), Prompt Engineering, AI Agents (exploring), OpenText, Cursor
Cloud & DevOps:	GCP (BigQuery, GCS, Pub/Sub), AWS, Docker, CI/CD
Visualisation:	Tableau, Power BI, Looker Studio
Concepts:	SDLC, Agile, TDD (JUnit), Data Governance, Design Patterns, DSA

PROFESSIONAL EXPERIENCE

Senior Data Engineer

January 2026 – Present

Quantiphi Analytics Solution Pvt. Ltd.

Bengaluru, India

- Platform Architecture & Technical Leadership:** Led end-to-end architecture and design of ELT pipelines and cloud-native data platform initiatives, defining standards for scalability, maintainability, and observability across the data stack.
- Python & PySpark Engineering:** Built advanced Python and PySpark-based transformation frameworks for XML/JSON schema validation, error handling, and data flattening—deployed as reusable libraries across multiple workstreams.
- GenAI & LLM Integration:** Built RAG-based experiments integrating LLMs APIs - exploring retrieval-augmented generation pipelines, prompt engineering, and LLM-powered workflow automation for internal tooling use cases.
- Stakeholder Collaboration:** Partnered with product and analytics teams to translate business requirements into robust data solutions; owned technical design documents and architecture review processes.
- Engineering Enablement:** Established team-wide best practices for SQL performance tuning, Python scripting, and CI/CD pipeline deployment; mentored junior and mid-level engineers through structured code reviews and knowledge-sharing sessions.
- Code Review & Mentoring:** Conducted structured code reviews for junior engineers; maintained CI/CD pipelines for automated testing and deployment of data pipeline changes.

Project: EDW Decommission – On-Prem to Snowflake Migration (Kemper Insurance)

- Framework Design & Delivery:** Independently designed and delivered 5 reusable Python/Snowflake stored procedure frameworks for extracting, transforming, and loading historical enterprise data from on-premise systems to Snowflake—enabling structured analytical access to years of decommissioned EDW data.
- Python Stored Procedures:** Built production-grade Python stored procedures in Snowflake Snowpark incorporating schema inference, validation layers, and structured error-handling to reliably flatten complex, nested XML and JSON datasets into relational Snowflake tables.
- ETL Automation & Replication:** Automated data replication and transformation workflows using Informatica IICS and HVR, replacing manual scripts with reliable, monitored pipelines ensuring data fidelity throughout the migration lifecycle.
- Data Governance:** Defined and enforced data lineage tracking, schema validation, and reconciliation standards across the migration project, ensuring compliance and auditability of migrated datasets.

Data Engineer

December 2022 – December 2025

Quantiphi Analytics Solution Pvt. Ltd. — Client: Kemper Insurance

Bengaluru, India

Project: RDZ – Raw Data Zone (Kemper Insurance)

- Data Transformation & Modelling:** Designed and implemented multi-layer SQL and Python transformation logic in Snowflake to consolidate data from 4 upstream sources into a structured Raw Data Zone, enabling reliable yearly and periodic reporting.
- High-Volume Pipeline Engineering:** Built and optimised ELT workflows using Python and Snowflake Snowpark, processing 200,000+ records in under 15 minutes—exceeding SLA targets and accelerating time-to-insight for downstream analytics teams.
- Data Quality & Reconciliation:** Implemented automated data quality checks (null detection, referential integrity, row-count reconciliation) and root cause analysis (RCA) frameworks to proactively surface pipeline anomalies and ensure reporting accuracy.
- Enterprise Orchestration:** Orchestrated cross-platform workflows using Control-M, managing dependencies between on-premise legacy systems and Snowflake to guarantee T+1 data availability for downstream analytics.
- Warehouse Cost Optimisation:** Tuned SQL queries and implemented Snowflake clustering keys and auto-suspend/auto-resume warehouse policies, achieving a 40% reduction in compute credit consumption without degrading query performance.
- Microservices & Secure Financial Transactions:** Designed and deployed production-grade RESTful microservices for financial transaction workflows. Integrated the Fireblocks API for secure digital asset transfers; optimised concurrency and throughput with structured exception handling and logging frameworks.

Data Engineer Intern

Quantiphi Analytics Solution Pvt. Ltd.

August 2022 – December 2022

Bengaluru, India

- Delivered a capstone analytics project on Hilton's property rental data, surfacing actionable insights to improve data-driven decision-making.
Tech Stack: Java, Python, SQL, Snowflake, Informatica, GCP, Azure, Tableau.

CERTIFICATIONS

AWS Certified Cloud Practitioner | Google Cloud Platform – Associate Cloud Engineer | Snowflake SnowPro Core Certification

EDUCATION

Bachelor of Technology – Computer Science & Engineering

Integral University — Lucknow, India

August 2018 – June 2022
