PROFESSIONAL SUMMARY

Senior Data Engineer with 3+ years of experience architecting scalable ETL/ELT pipelines, cloud-native data warehouses, and production-grade microservices. Demonstrated expertise in workflow orchestration (Control-M, Airflow), Snowflake (Snowpark), and distributed system optimization—processing 200k+ records in under 15 minutes while achieving a 40% reduction in compute costs. Since August 2025, deepened Python engineering within Snowpark—building production-grade XML/JSON parsing frameworks, schema validation layers, and transformation logic natively in Snowflake. Strong foundation in SDLC, CI/CD, system design, and API development.

TECHNICAL SKILLS

Programming & Frameworks: Python (Snowpark, Pandas, PySpark), Java, SQL, XML/JSON Parsing

Data Engineering: ETL/ELT, Data Pipelines, Workflow Orchestration (Control-M, Airflow), dbt, Data Modeling, Data Quality

Data Platforms & Warehouses: Snowflake (Snowpark), PostgreSQL, MySQL, BigQuery

Cloud & DevOps: GCP (BigQuery, GCS, Pub/Sub), AWS, Docker, CI/CD, Terraform

Integration Tools: HVR, Informatica (IICS), Fivetran, dbt, REST APIs (Fireblocks)

Visualization: Tableau, Power BI, Looker Studio

Concepts: SDLC, Agile, TDD (JUnit), Data Structures & Algorithms, Design Patterns

PROFESSIONAL EXPERIENCE

Senior Data Engineer
January 2026 – Present

Quantiphi Analytics Solution Pvt. Ltd.
Bangalore, India

- **Platform Architecture & Technical Leadership:** Lead end-to-end architecture and design of ELT pipelines and cloud-native data platform initiatives, defining standards for scalability, maintainability, and observability across the data stack.
- **Snowpark Python Engineering:** Leading the design and development of advanced Python-based parsing and transformation frameworks within Snowflake Snowpark—establishing reusable libraries for XML/JSON schema validation, error handling, and data flattening used across multiple project workstreams.
- **GenAI Tooling:** Actively prototyping Python-based AI agents and RAG-based workflows to experiment with automating documentation search and basic SQL generation for internal teams.
- **Engineering Enablement:** Establishing team-wide best practices and coding standards for SQL performance tuning, Python scripting, and CI/CD pipeline deployment; actively mentoring junior and mid-level engineers through structured code reviews and knowledge-sharing sessions.
- **Stakeholder Collaboration:** Partnering with product and analytics teams to translate business requirements into robust data solutions, owning technical design documents and architecture review processes.

Data Engineer
December 2022 – December 2025

Quantiphi Analytics Solution Pvt. Ltd.
Bangalore, India

- **High-Volume Pipeline Engineering:** Designed and optimized ETL/ELT workflows using Python and Snowflake Snowpark, consolidating data from 4 distinct upstream sources. Tuned ingestion logic to process 200,000+ records in under 15 minutes, exceeding SLA targets.
- **Enterprise Orchestration (Control-M):** Orchestrated complex cross-platform workloads using Control-M, managing dependencies between on-premise legacy systems and cloud-native Snowflake jobs to ensure T+1 data availability for downstream analytics.
- **Snowpark Python Parsing Framework:** Deepened Python engineering within Snowflake Snowpark—independently designed and built a production-grade parsing framework for complex, nested XML and JSON datasets, incorporating schema inference, validation layers, and structured error-handling to reliably flatten semi-structured data into relational Snowflake tables.
- **Warehouse Cost Optimization:** Tuned SQL queries and implemented Snowflake clustering keys and auto-suspend/auto-resume warehouse policies, achieving a 40% reduction in compute credit consumption without degrading query performance.
- **ETL Automation & Replication:** Automated data replication and transformation workflows using Informatica IICS and HVR, replacing brittle manual scripts with reliable, monitored, scheduled pipelines.
- **Data Quality & Governance:** Implemented automated data quality checks (null value detection, referential integrity, row-count reconciliation) and root cause analysis (RCA) frameworks to proactively surface pipeline anomalies.

- **Microservices & Secure Financial Transactions:** Designed and deployed production-grade RESTful microservices for financial transaction workflows. Integrated the Fireblocks API for secure digital asset transfers; optimized concurrency and throughput with structured exception handling and logging frameworks.
- **Mentorship:** Guided junior engineers on SQL performance tuning, Python scripting best practices, and pipeline deployment standards.

Data Engineer Intern August 2022 – December 2022
Quantiphi Analytics Solution Pvt. Ltd. Bangalore, India

- Delivered a capstone analytics project on Hilton's property rental data, surfacing actionable insights to improve data-driven decision-making. Tech Stack: Java, Python, SQL, Snowflake, Informatica, GCP, Azure, Tableau.

CERTIFICATIONS

AWS Certified Cloud Practitioner | Google Cloud Platform – Associate Cloud Engineer| Snowflake SnowPro Core Certification

EDUCATION

Bachelor of Technology – Computer Science & Engineering August 2018 – June 2022
Integral University Lucknow, India
